About Me

From building computers with my grandfather as a child, to a novice hacker

who configured Halo to run on the school shared server; I have always, in some

form, have yearned to become a Software Engineer. A person who takes on

these challenges given and solving them problem by learning new skills,

creatively concocting new ideas or retrofitting old ones for both my personal

growth and sheer enjoyment. This thread has followed me throughout, despite

personal hardships and will hopefully extend into the future.

This intrinsic passion has brought me through penury, great strife and tempestuous

times. Optimistically however, it will propel me even further and with your help,

towards the institution of a legacy built on enduring with hard-work and a smile.
